

You see increasing first responder needs,  
interoperability challenges,  
and decreasing budgetary support.

## We see a cost-effective communications center solution.

**A scalable communications system** saves money and improves response.

**A well-planned, scalable and cost-effective communications infrastructure** is required for today's complex public safety and emergency response environment. Public safety agencies are increasingly turning to the development of communications master plans to control spending and to design an integrated solution.

**As public safety professionals, iXP understands your concerns.** We are committed to working with state, county and municipal agencies to establish cost-effective approaches to meet current and future performance demands. We bring you a proven approach and in-depth experience to implement the *total* emergency communications functionality you need to meet these demands.

**We conduct a thorough analysis** of the current emergency communications environment in use by your responding agencies and dispatch centers. Research is also conducted on public safety communications systems in use by neighboring agencies, and critical interoperability needs are identified.

**This information is synthesized** with the growth projections and operational needs of the agencies involved to provide a communications master plan that can guide the development of efficient and scalable communications centers. It guides the systematic implementation of the technology infrastructures needed to ensure reliable response now and in the future.

**Public safety and security organizations have sought** iXP's knowledge and experience in designing, implementing

and supporting complex scalable solutions such as:

- A *total* managed solution for the Cities of Sandy Springs and Johns Creek Georgia (the Chattahoochee River 9-1-1 Authority);
- A public safety communications Master Plan for Buckeye, AZ;
- Modernization and renovation of the five communications centers for the Fire Department of the City of New York.
- 24x7 technology support of the New York City Police Department's public safety answering center.

**You benefit from iXP's in-depth experience in consolidation** and co-location. We work with public safety organizations in large and small municipalities to seamlessly combine disparate agencies into a single facility or onto a single technology, ensuring that the operational needs of all parties are met.

**When the Cities of Sandy Springs and Johns Creek** were seeking a trusted partner for their E9-1-1 solution they hired iXP to design, implement, construct, manage, and staff their new E9-1-1 communications center. It is the first E9-1-1 public-private partnership in the U.S.

**iXP will work with you** to develop a customized solution that fits your budget and enables you to meet your current and future response requirements. You get the ability to manage complexity with confidence and financial predictability. **Problem Solved.**

Manage a complex world with confidence. **Problem Solved.**
