

Comprehensive Planning for Emergency Communications

IXP creates custom emergency plans and trains personnel to make sure people and property are safe and secure.

IXP's team is recognized as experts and leaders in public safety and emergency communications projects for clients looking for assistance in strategic planning or renovation within their emergency and operations centers. Through our consulting services, IXP can **optimize the service and technology levels**, all while keeping the cost sustainable. We understand each client has varying processes, staffing, resources, technology, governance, and fiscal requirements; however, we incorporate all those variables and work to design the **best fit solution** to meet individual and group goals.

Our consulting services provides objective information to decision-makers regarding the existing environment, potential future challenges and adequate solutions that can achieve long-term improvements in service levels and cost efficiencies.

Following our proprietary **SAIF® Methodology**, we conduct a detailed assessment and vendor-neutral recommendations that provide our clients with the knowledge needed to make their vision a reality. Based off the assessment, a **Business Case** is distributed that outlines the best possible solutions and what is required to implement those solutions. Our consultants have experience in all realms of public safety, which allows us to match our consultants with the experience of the client, permitting for the creation of collaboration and trust.
